Decision Alignment - Install

The goal is to be aligned on decisions before they happen - to be “pre-aligned” on 4th downs, timeouts, and situational decisions (i.e. PATs, challenges, etc.)

Weekly Staff Alignment Process

During the week we’ll discuss:

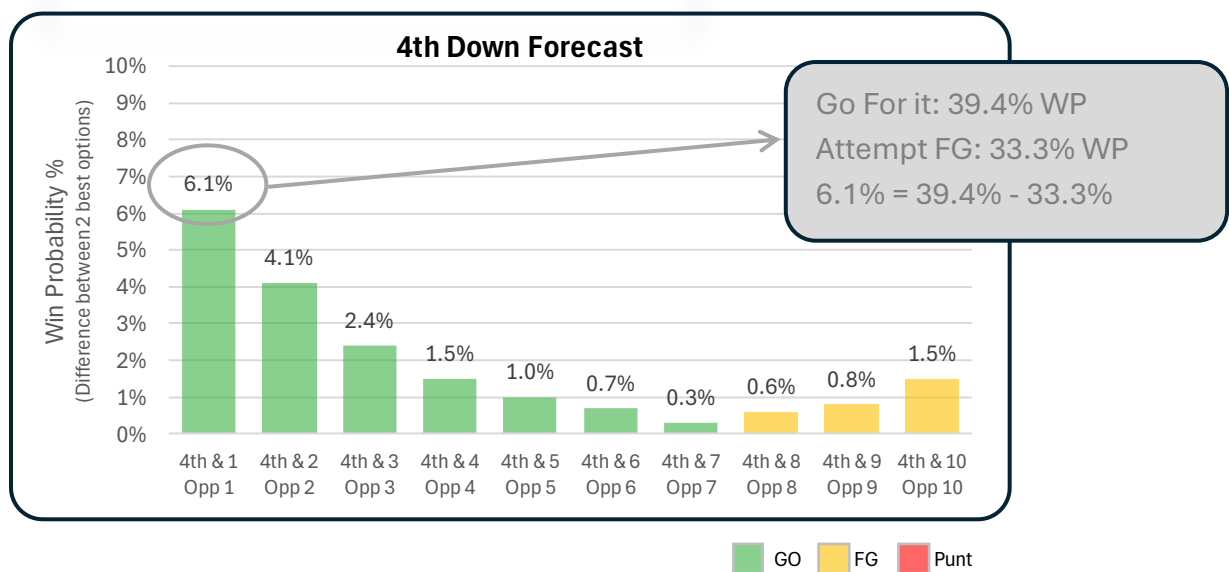

- Overall game management philosophy for the matchup.
 - How aggressive we want to be.
 - Strengths and concerns (i.e. based on score, field position, clock, etc.).
- **Recommendations will be customized to reflect agreed-upon thresholds by game.**

Operational Workflow (4th down example)

- Initial recommendations updated every 1st down - comparing the win probabilities for 4th down options (i.e. going for it versus the next best option).
- Actual recommendations will be adjusted based on agreed-upon thresholds - defined as the minimum recommendation value the staff is in alignment to act on.

4th Down Scenario Example

Game State: Q1 7:12 | 1st & 10 | Opponent 10-yd line | Trailing by 7

Overview

- The bars are color-coded (Green = Go, Yellow = Attempt FG, Red = Punt).
- The number above each bars shows how much win probability is at stake - the larger the number the stronger the recommendation.

Initial recommendations

- 4th & 7 or less → Go for it
- 4th & 8 or more → Attempt FG

Actual recommendations (with 5% threshold)

- 4th & 1 → Go for it
- 4th & 2 or more → Attempt FG
